SECTION 11 : TOXICOLOGICAL INFORMATION

TOXICOLOGICAL INFORMATION:

Acute Toxicity: MISCELLANEOUS TOXICOLOGICAL INFORMATION:
Copper alloy products in the natural state do not present an inhalation, ingestion, or contact hazard. However, operations such as burning, welding, sawing, brazing, or grinding may release fumes and/or dusts which may present health hazards if TLV's are exceeded.

ACUTE TOXICITY: Short term exposure to fumes/dust may produce irritation of eyes and respiratory system. Inhalation of high concentration of oxide fumes of copper may cause metal fume fever characterized by a metallic taste in the mouth, dryness and irritation of the throat and influenza like symptoms. All nickel containing dusts are regarded as carcinogenic by inhalation. Ingestion of large doses of nickel compounds (1.3 mg/kg) has been shown to cause intestinal disorders, convulsions, and asphyxia.

Chronic Effects: Nickel is a confirmed carcinogen with experimental carcinogenic and tumorigenic data reported. Hypersensitivity to nickel is common and can cause allergic contact dermatitis, pulmonary asthma, and conjunctivitis.
